Find all corporate information quickly and easily using…

The only purpose built turnkey search solution for Australian enterprises

Organisations have long realised that there is a wealth of information which is not used adequately because staff either don't know the information exists or have trouble accessing that information. This is where iFerret excels. Its core search engine technology helps deliver greater accessibility to information across all the corporate digital information.

As intuitively as searching in Google, any user can now find any piece of information which they have permission to access, whether that information is in a document management system, corporate application, email, email archive or network drive.

Both structured and non-structured information becomes quickly and easily accessible through a single user interface with no need to log in to multiple complex corporate applications.

> "A recent Accenture survey of 1,000 middle managers found they spent as long as two hours a day searching for information and more than half the information they found was not relevant to their issue."

Let iFerret find your information… FAST!

iFerret Features
